PROFESSIONAL SUMMARY

Apprentice Technology professional at Standard Chartered GBS with experience in backend microservices, DevOps, and payment processing. Skilled in API integrations and Kubernetes/Helm deployments in regulated environments, with a strong focus on clean, scalable engineering.

EDUCATION

2021 – 2025 **BTech in Computer Science and Engineering**, SRM University (GPA: 8.24/10)

WORK EXPERIENCE

Development Engineer Apprentice – Technology, Standard Chartered GBS India *Sep 2025 – Present*

Tech Stack: Java, Spring Boot, Microservices, REST APIs, Oracle DB, JUnit, Azure DevOps

- Implemented processing logic for ISO 20022 messages (**pain.002**, **pain.012**, **camt.001**, **camt.005**, and **admi.002**) within Spring Boot microservices using Apache Camel and Solace.
- Built channel and country-specific unmarshalling with field-level validation, persisted data to Oracle DB, and implemented business validation by polling from the database.
- Implemented technical validation for debit response and credit request messages, including status flow verification and end-to-end transaction processing.

Full Stack Developer Intern – Infosys Springboard *Nov 2024 – Feb 2025*

- Developed and deployed a full-stack web application using **Java**, **JavaScript**, **React**, and RESTful APIs.
- Integrated backend services with relational databases, improving query performance and overall application efficiency.

PROJECTS

Real-Time Direct Debit Instruction (RIDDI) – Standard Chartered Bank *2026 – Present*

- Implemented country-specific business validation rules for multi-country transactions ensuring regional regulatory compliance.
- Designed technical validation framework for on-us and off-us transactions with field-level validation and idempotent persistence using **Spring Data JPA** in Oracle DB.
- Conducted end-to-end testing utilizing ESIF framework modules (Core, Drools, REST API) for validation logic.

Bank Indonesia Fast Payment – Standard Chartered Bank *Jan 2026 – Apr 2026*

- Orchestrated microservices to route payment messages between source and destination endpoints. Defined YAML configurations per microservice to enable dynamic processor routing by channel and country.
- Authored **JUnit** tests with **JaCoCo** coverage and contributed to end-to-end test automation.
- Deployed microservices on **AKS** using **Kubernetes** and **Helm**, with automated **Azure DevOps** CI/CD pipelines.

DLT LEARNING EXPLORATION

- Studied permissioned blockchain architectures including **Quorum**, **Hyperledger Besu/Fabric**, and **Corda** for enterprise use cases.
- Explored DLT patterns for cross-border payments, decentralized identity (DID), and tokenized asset workflows.
- Developed foundational knowledge of blockchain security concepts including digital signatures, key management, and secure transaction design.

TECHNICAL SKILLS

Programming Languages: Java, C/C++, Python, SQL

Frontend: React.js, HTML, CSS, JavaScript

Backend & APIs: Spring Boot, Spring Data JPA, REST APIs, Microservices

Messaging & Integration: Apache Camel, Kafka, Solace

Databases: Oracle, MySQL, PostgreSQL

Cloud & DevOps: AWS, Azure, Kubernetes, Helm, Azure DevOps

Testing & Tools: JUnit, JaCoCo, Postman, Git, Maven, Linux

Software Engineering: OOP, Automation, API Integration, Performance Optimization

ACHIEVEMENTS

- Awarded **SNF (Shiv Nadar Foundation)** 100% academic scholarship.
- Participant – **Code2Code Hackathon** (Automated the consolidation of various reports).

CERTIFICATIONS

- NPTEL:** Database Management Systems (Elite)
- Standard Chartered:** Fundamentals of Containerization (ID: 0053179037)
